

Project 1> Name / Location: Paris PARC / Paris, France
 The building site is wedged into a dense context between the emblematic architectures of the Albert Grid the Cassan building and the Institute Monde Arabe. The site connects the IMA square to the park, and fills the space of the originally planned green axis of the Jussieu Campus.

Diagrams

Project 2> Name / Location: The 5 pillars of Bawadi / Bawadi, Dubai
 The traditional hotel diagram - fat at the bottom, thin at the top. However the value diagram is inversely proportioned as an inverted pyramid with maximum program on the top, and a reduced footprint. The generic layout of an American hotel and retail complex is a public podium with private towers. Following the logic of the inverted pyramid of value and sustainability the architects propose to turn the American city upside down. A public canopy resting on a forest of private columns. The canopy can contain all the public functions supporting the hotels - lobby, restaurants, gardens, conferences, auditoria, banquets spaces and retail. An urban canopy of program supported by five pillars of accommodation. As an architectural embodiment of an Islamic society itself, it is an elevated community in the sky founded on 5 pillars.

Diagrams

Project 3> Name / Location: Boscolo Hotel / Nice, France
 The three adjacent buildings and new fourth one are extend to merge in a single structure, creating a series of gates for the public park to pass beneath them. Like a contemporary interpretation of the archway or passage, the hotel forms a generous cover for the public life beneath.
